FINAL ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 7, 9, 13, 14, 16, 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi in view of admitted prior art.

Takahashi (US No. 6, 282,197) discloses an ATM switching apparatus, comprising: means for determining whether a received message is a request message for a first path (e.g setup message, col 2 lines 65-67, col 3 lines 1-5, col 10 line 43), the request message including a requested bandwidth information for a plurality of paths set for the service required by the subscriber (e.g. PCR rate, col 4 lines 41-44), means for securing a bandwidth based on the requested bandwidth information set in the request message for the first path between the service provider and the subscriber in response to receiving the request message for the first path (col 4 lines 49-55 ,col 17 lines 4-5), as in claims 1, 7, 13, 14; extraction means to retrieve messages from a subscriber (col 10 lines 41-53), a message determination device to determine whether the message extracted by the message extraction device is a request message for a first path between the service provider and the subscriber (col 10 lines 41-53) and a bandwidth securing and processing device to secure a bandwidth information request message in response to receiving the request message for the first path (col 17 lines 1-7) , as in claim 9; sending a request

Art Unit: 2661

message from the subscriber to the switching system to set in order of large bandwidth to small bandwidth the various bandwidth which correspond to multiple paths required to provide the service (e.g. QOS, Fig. 9, col 16 lines 66-67, col 17 lines 1-9) , securing the bandwidth required between the service provider and the subscriber in order of large bandwidth to small bandwidth in response to the request message (e.g. QOS, Fig. 9, col 16 lines 66-67, col 17 lines 1-9), as in claim 16.

Takahashi did not specifically disclose a channel type of each path being different as in claims 1,7,9, 13, 14 , 16 and 20.

Admitted prior art (Fig. 2) discloses a conventional switching system 30. In Fig.2 subscriber A,B,C and D, switching system 30 and server 35 are indicated by vertical lines. When subscriber A sends a setup message for the control channel , system 30 secures the control channel bandwidth and sends message to the server. Likewise subscriber B,C and D proceed in the same manner to set said control channel. Server 35 sends path completion messages to all subscribers. Subscriber A,B,C and D proceed in the same manner to set the voice channel and image channel , as in claims 1,7,9, 13, 14 , 16 and 20.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to provide a channel type of each path being different as in the prior art to the unit disclosed by Takahashi with the motivation of obtaining a switching apparatus capable of decreasing the probability of a connection establishing a request being rejected.

Allowable Subject Matter

3. Claims 2-6, 8, 10-12, 15 and 17 are allowed.

Conclusion

4. New claim 18 has been renumbered 20. (Claims 18 and 19 were canceled in previous amendment by applicant.
